

Design a time management interface that would allow users to

- enter time / hours worked on a project
- view status of time / hours submitted
- add notes
- submit timesheet
- view previous timesheets
- access on mobile (phone / tablet) and desktop
*you can choose to design a responsive interface or create a separate mobile app

Rules

- You may add features not on the above list if you think it will enhance the experience
- The solution can be delivered as a wireframe, mock up, user flow, site map, prototype etc.
*Whatever works best to communicate the solution
- You can deliver more than 1 solution

What to know before you start...

MBO Partners provides independent consultants and their clients a suite of services and tools that help them manage the back office responsibilities of running a business such as taxes, expenses, collections, and payroll.

One of the most used tools in our system is time entry. Consultants bill clients by hours spent on a project. This is how they get paid.

Persona Sample

Kelly Smith,
Front-End Developer

Kelly is always busy, often working on two projects for different clients at one time. Because of his schedule, he sometimes forgets to enter his hours. Since freelancing is his source of income, it is important for Kelly to have a tool wherein he can easily manage billing of his hours to clients.
